

High-Energy-Density and Low-Cost Flow Electrochemical Devices

>> Developed by **Prof. LU Yi Chun et al**
Department of Mechanical and Automation Engineering

Aim	Applications
<ul style="list-style-type: none">• To develop ultra-high-energy-density and low-cost flow electrochemical devices	<ul style="list-style-type: none">• Electric vehicle• Large-scale electricity storage

Features

- Key novel design of electrode structure and flow configuration
- Higher energy density compared to current redox flow batteries of any given electrode active materials
- No compromised electrical conductivity as compared to the semi-solid approach
- No phase-separation issues
- ↓ usage of ion-permeable membrane
- ↓ costs for suspension optimization & expensive membrane
